

# DIISHA'S SPECTRUM

This level will be engaging the funneling partners from the private sector as part of the DHAM (Digital Health Annuity Model). This will be achieved by licensing the aggregated insights of the State's beneficiary data. Its strategic partnerships in the life sciences industry will help the State forge collaborations in healthcare from diverse sectors like Pharma and research organizations, insurance sector companies, FMCGs, medical device manufacturing organizations, etc.

The Digital Health Record of the beneficiary begins from the time of enrolment into DIISHA and follows until the creation of an ABHA ID. It includes 5 layers of validation for identification of the beneficiary, the other 5 layers determine the DBT eligibility of the applicant.

The Asia's largest healthcare pilot project is being conducted by level nine. This Piloting Agency is India's leading emerging tech-piloting agency contributing to our PM's vision, that is, to deliver the finest healthcare facilities in all over India, especially in the backward areas.

Evidence-based Automated Screening Solution is aligned with the Indian Standard Treatment guidelines for the proactive identification of Anemia and Diabetes in pregnant women, children, and men. An AI/ML-powered platform is being developed to onboard central and national schemes to ensure streamlined screening of any NCDs and CDCs.

Level eight is bringing in an AI-based virtual assistant to support and train the ASHAs. This virtual assistant will be available on WhatsApp and frontline health workers will be able to attain support from this chatbot 24/7. The cycle of 'Recognize, Reward & Reimburse' for ASHA workers will be fulfilled by this chatbot.

At level three, DIISHA will cover doorstep testing, examination, sample collection, laboratory analysis, and test results. Sharing test results with the patients through ASHA workers and uploading them on national health records attached to the beneficiaries' ABHA ID comes under the role of L3. The test results being uploaded will be further evaluated by the doctor within a few hours and based on the outcome, a medical prescription will be provided.

Level seven emphasizes testing the beneficiary with the help of an electronic device like Fitbit, Iwatch, Ayurveda Nadi watch, etc. This is possible by relying on an affordable health device that will ensure inclusive coverage of wellness screening in various targetted regions.

At this level, doctors will be onboarded in physical and virtual mode to evaluate the uploaded test results of the patients flagged as symptomatic to the listed NCDs. These doctors will provide apt medicine prescriptions along with dietary recommendations and better lifestyle measures.

The Pharmacy Agency is engaged in the business of manufacturing, marketing, and distribution of pharmaceutical, nutraceuticals, and allied products via intermediaries. This level caters to domestic and export markets as well.

Level five will ensure the availability of drugs and supplements and any other consumable product required at the PHC window of the region. This segment is one of the most innovative and progressive ones that is focused on upgrading STG and care.
