

THE NCDs ON PRIORITY

1. Anemia
2. Diabetes
3. Hypertension

ANEMIA

Anemia, a health condition marked by low levels of red blood cells or hemoglobin, causing symptoms like fatigue and weakness. It can result from factors like iron deficiency or chronic illnesses, impacting oxygen transport in the body.

Anaemia affects roughly **1.62 billion** people globally, making it a widespread health concern.

DIABETES

Diabetes, a widespread health condition marked by elevated blood sugar levels, impacting millions globally. It requires careful management to prevent complications like heart disease and nerve damage, often through lifestyle changes and medication.

Over **400 million** people worldwide live with diabetes, highlighting its widespread impact on global health.

HYPERTENSION

Hypertension, or high blood pressure, is a chronic medical condition characterized by elevated blood pressure levels in the arteries. It often has no symptoms but increases the risk of heart disease, stroke, and other complications.

Hypertension impacts around **1.13 billion** individuals worldwide, posing significant cardiovascular risks.
